

WHAT IS 5G?

1. A military radar technology used for weapons and surveillance since 1942, and is now adapted for communication as well.
 - Tiny special antennas locks on to any 5G-capable unit within reach, and sends laser like rays in both directions (on top of existing radiation from 3G/4G).
 - >30.000 satellites will increase impacts and give 3D exposure.
 - Increased exposure + new type of rays = increased impact:
Disturbing immune system + metabolic and neurological functions. Damage to eyes, skin and sperm. Increased risk of cancer, depression and dementia.
Birds and bees (insects extra, if 5G). →
Trees and plants. *Scan QR code* →
2. Very difficult to hide from exposure.
3. Violations: Not tested for safety. Violates/brakes several international conventions + EU Resolution 1815 + national laws.

IT CONCERNS ALL!

What to do?

- Tell politicians, telecom and media that you don't want 5G.
- Spread awareness.
- Don't buy "smart" or 5G-products.
Turn off Wi-Fi when not using it.
